

Single unrestrained Full-Faced Rubber Flange

MAC-F series

These expansion joints can be fabricated with single and multiple arches with flanged connections.

Regardless of accessories, such as liners and covers, this model absorbs all of the movements in any one length of piping.

It does not restrain pressure thrust so adequate anchors and guides must be provided, and they can be used only in piping systems that incorporate correctly designed anchors and pipe alignment guides. These expansion joints are made of one single bellows element with end connections.
